MEAN Belt Exam
Required Features:

- Login and logout.
- Display all the games played with complete information: name of user, score, percentage. Search feature should also be implemented here.
- Ability to add a new question. Form should have validation
- Have at least 5 questions saved in the database. When users play, randomly pick 3 questions from the database.
- For the game (test), have a validation that would check if there is an answer for each for the question.
- You must be able to deploy your work to Amazon EC2 and provide the IP address or subdomain/domain name to where your work has been deployed. Please note that Heroku deployment is not honored.

Submission Requirement: Your code, a text file with the IP address or subdomain/domain name for the deployed work and short video demo link.

Note:

- The wireframe is available for download here .
- Create a 2-3 video showing what you have built. On the video, show the functionality of the page you have built. You may download a trial version of Jing or Snag-it or Quicktime for video creation. You may save it on Dropbox public folder and copy the public link.
- To prevent other students from copying your work, please make sure your video demo is set to unlisted or with a password, and code is not saved on GitHub.
- To minimize score deduction, please make sure you upload the complete requirements (database file, video demo).
- If you are having trouble uploading files on the Exam App, please DO NOT unlock another exam. Please email the file to remote-instructors@codingdojo.com and CC your instructor.
